

We measure by you®

Savings for you through thermal storage

Reduce energy used during peak load times, provide a more comfortable environment and make your operation more efficient, all at the same time through the correct use of a thermal storage system.

When it comes to thermal storage, especially in conjunction with highly efficient ammonia refrigeration, Bassett Mechanical is the company to call for experience and answers.

Bassett Mechanical – the thermal storage experts for

- Energy savings and large-scale energy-use reduction
- Movement of major energy loads to off-peak times
- Modernization of equipment for sanitary reasons and cost-effectiveness
- Design of cleaner, more efficient systems
- Sanitary ice systems – perfect for dairy- and food-plant applications

Our Experience Counts!

- Miller Electric Manufacturing in Appleton, Wisconsin, is considered one of the finest examples of successful thermal storage and off-peak cooling in the nation. Bassett Mechanical engineered and built Miller's thermal storage system, gaining positive world-wide attention for the system and Miller Electric's progressive attitude toward reduced energy use.
